

Yoshihiko Tomofuji. M.D., Ph.D. (Last update: 2023-10-19)

Address (Office): Department of Genome Informatics, Graduate School of Medicine, the University of Tokyo 7-3-1 Hongo, Bunkyo-ku, Tokyo 113-0033, Japan

Tel: +81-3-5841-1860

Email: [ytomofuji\[at\]m.u-tokyo.ac.jp](mailto:ytomofuji[at]m.u-tokyo.ac.jp)

X (Twitter): [@YoshiTomofuji](https://twitter.com/YoshiTomofuji)

Github: <https://github.com/ytomofuji>

Personal HP: <https://ytomofuji.github.io/>

Present Position:

Assistant Professor, Department of Genome Informatics, Graduate School of Medicine, the University of Tokyo, Tokyo, Japan. 2023-

Visiting Scientist, Department of Statistical Genetics, Osaka University Graduate School of Medicine, Osaka, Japan. 2023-

Visiting Scientist, Laboratory for Systems Genetics, RIKEN Center for Integrative Medical Sciences, Yokohama, Japan. 2023-

Education:

Osaka University, Osaka, Japan. 2020-2023

Ph.D. in Medicine

Dissertation: "Prokaryotic and viral genomes recovered from 787 Japanese gut metagenomes revealed microbial features linked to diets, populations, and diseases" ([URL](#))

Mentor: Dr. Yukinori Okada

The University of Tokyo, Tokyo, Japan. 2012-2018

Doctor of Medicine

Academic Appointments:

Assistant Professor, Department of Genome Informatics, Graduate School of Medicine, the University of Tokyo, Tokyo, Japan. 2023-current

Clinical Residencies:

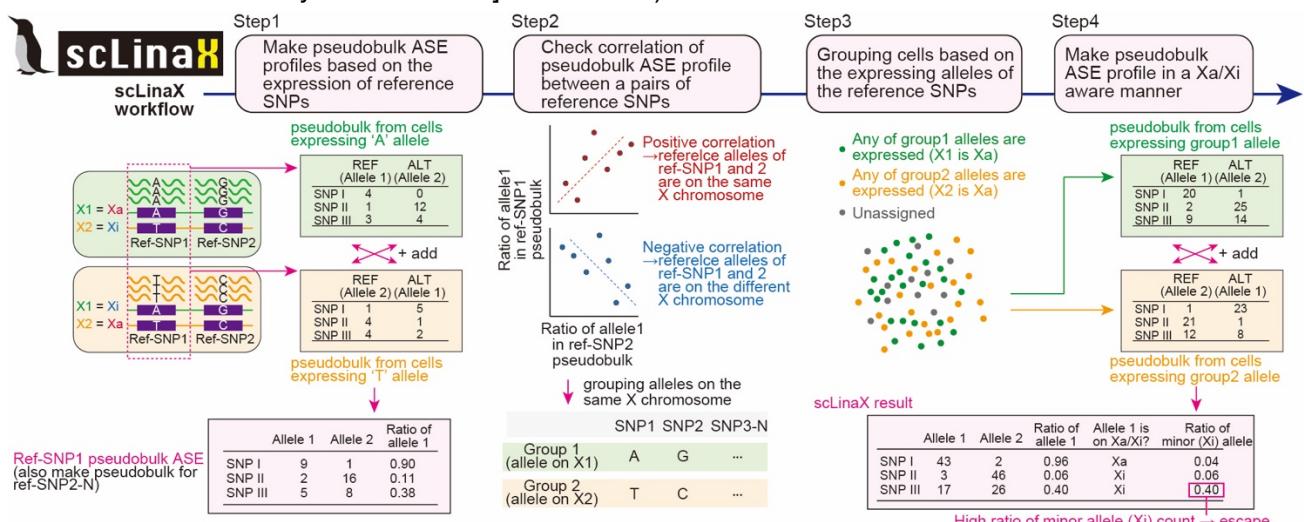

The University of Tokyo Hospital, Tokyo, Japan. 2019-2020

Personal Statements:

Yoshihiko is a researcher in the fields of medicine and bioinformatics. Currently, he is working on the analysis and method development of single-cell omics data at the University of Tokyo (PI: Dr. Yukinori Okada). He got a degree of M.D. from the University of Tokyo. During his time as a medical student, he conducted research on the thymic selection of T cells and autoimmunity (PI: Dr. Hiroshi Takayanagi), engaging in both wet and dry experiments (Tomofuji Y et al. *Nat. Immunol.* 2020). Following two years of clinical training, he started Ph.D. training under Dr. Yukinori Okada at Osaka University, focusing on bioinformatics research related to the gut microbiome and human genetics (Tomofuji Y et al. *Ann. Rheum. Dis.* 2021/2022, Tomofuji Y et al. *Cell Genom.* 2022, Tomofuji Y et al. *Nat. Microbiol.* 2023, Tomofuji Y et al. *Cell Rep.* in Press). After he got a Ph.D. from Osaka University, he moved to the University of Tokyo (Yukinori Okada's lab) as an assistant professor and started to work with single-cell omics technology. Specifically, he developed a new method to refine the understanding of the basic biological phenomena such as X chromosome inactivation (Tomofuji Y et al. *bioRxiv* 2023). He always loves to uncover the hidden treasures in omics data through the development of new methods.

Research Interests:

- Integrative analysis of the single-cell omics data and genome data for immune cells. In addition to the conventional functional genomics approaches such as pseudobulk eQTL mapping, I am specifically interested in the development of new methods to uncover hidden biology in the omics data.
 - Evaluation of the escape from X chromosome inactivation ([Tomofuji Y et al. bioRxiv 2023](#); co-correspondence; This work is a part of Human Cell Atlas Consortium [Asian Immune Diversity Atlas Network] [Github URL](#))

- Analysis of the gut microbiome using metagenome shotgun sequencing. I am specifically interested in autoimmune diseases, Japanese-specific gut microbes, and integrative analysis with human genome data.
 - Integrative analysis of the gut microbiome, human genome, and plasma metabolites (Tomofuji Y et al. *Cell Rep.* in Press; co-correspondence)
 - Evaluation of the human genome in the metagenome shotgun sequencing data ([Tomofuji Y et al. *Nat. Microbiol.* 2023](#); co-correspondence)
 - Catalogue of the microbes in the Japanese gut ([Tomofuji Y et al. *Cell Genom.* 2022](#); co-correspondence)
 - Gut virome analysis of the RA/SLE/MS patients ([Tomofuji Y et al. *Ann. Rheum. Dis.* 2022](#))
 - Gut microbiome analysis of the SLE patients ([Tomofuji Y et al. *Ann. Rheum. Dis.* 2021](#))
- Transcription regulation of the thymic antigens which contribute to the thymic selection of T cells. I approached this question during medical school utilizing both wet and dry approaches.
 - Elucidating the role of chromatin remodeling protein Chd4 in the thymic antigen expression ([Tomofuji Y et al. *Nat. Immunol.* 2020](#))

Awards:

- JSPS Ikushi Prize, 2023/3 ([URL](#))
- Dean's Award of MD Researcher Training Program, Faculty of Medicine, The University of Tokyo, 2017/10

Presentation awards:

- The 14th International Workshop on Advanced Genomics, Poster Award, 2023/10
- Japan College of Rheumatology 2023 ICW Excellent Abstract Award, 2023/4
- The 7th Annual Meeting of the Japanese Society of Osteoimmunology, Best Presentation Award, 2022/6
- Japan College of Rheumatology 2022 ICW Excellent Abstract Award, 2022/4

Grants / Scholarships:

- Osaka University, Institute for Open and Transdisciplinary Research Initiatives, Junior Researcher Joint Projects, Project Leader, 2021/12 (Grant)
- Takeda Science Foundation Scholarship, 2020/4 - 2023/9

Teaching experiences:

- A practical course, Biochemistry, 2023-, Graduate School of Medicine, the University of Tokyo, Tokyo, Japan
